

# SUNSPACE Porch Windows

SUNSPACE TWIN CITIES | Your authorized dealer for Sunspace products in Minnesota and Western Wisconsin.

## Vertical 4 Track Windows

Vertical 4 Track windows are our most popular product and provide the most functionality for enclosing your porch.

Closing the windows keeps out the rain, wind, dust, and snow. Opening the windows gives you the outdoor feeling of a screened-in porch.

Single window units are custom made to your desired opening sizes up to 54" wide and 108" tall. Also available in all five colors!

## Vertical 4 Track Mullered Units

Vertical 4 track windows can be mullered together in the factory into double or triple wide units.

Double window units are custom made to your desired opening sizes up to 96" wide and 108" tall.

Triple window units are custom made to your desired opening sizes up to 144" wide and 108" tall.

Mullered units have a 2" wide vertical bar between the window units. Available in all five colors.

## Entry Doors

Our Sunspace Entry Doors are custom sized to fit openings, with in-swing or out-swing options. They are built for durability with a stainless steel threshold and locking hardware. Choose from all five available colors.

Single wide doors up to 42" wide and 96" tall. Double doors up to 84" wide and 96" tall.

Included locking hardware available in silver, bronze, or antique brass.

## Sunspace Porch Windows & Fall Protection

If your porch is more than 30" off the ground, building code dictates that some type of fall protection needs to be implemented. There are quite a few options available for this, below we show the most popular methods. Always consult your local building official as interpretations can vary by municipality.

### Sunspace Porch Windows without Railing

For a porch that is less than 30" off the ground, you can have the Sunspace Porch Windows from floor to ceiling without any type of guard rails or fall protection. The sliding panels can collapse down to the floor or be pushed up to the ceiling. This style allows for 75% screen ventilation and the most open views.

### Sunspace Porch Windows with Glass Railing

An aluminum deck railing can be installed within a full height Sunspace Vertical 4-Track porch window. This particular porch railing uses a piece of tempered glass as the infill instead of standard pickets used in the traditional railing. This provides a more open look and feel than having vertical lines of pickets.

Simply push the window panels from behind the railing all the way to the top or bottom of the window for 75% open screen—you'll never have to stick your hands through the railing or bend down to operate the windows!

### Sunspace Porch Windows with Fixed Glass

Sunspace Porch Windows can be installed with a fixed panel of tempered glass in the bottom 36" to provide for fall protection.

The tempered glass panels do not open and the sliding window panels do not drop down below the 36" height. This results in some loss of ventilation, but does give a great look and open feeling.

When the view into your backyard is important, this is the most popular method. The tempered glass panels are manufactured with the same aluminum frames as the operable windows and carry the same lifetime warranty.

### Sunspace Porch Windows with Traditional Railing

Sunspace Porch Windows can be installed full height (floor to ceiling) to allow for 75% screen ventilation and use a traditional "picket" style of railing to provide for fall protection. The railing is most commonly installed inside of the windows but can be done on the outside as well. In this method, the window panels can drop down behind the railing, or be pushed up to the top.

Sunspace manufactures aluminum railings in colors to match the Sunspace Porch Windows and we can install them together on your porch project.

## Why Vinyl Porch Windows?

Sunspace Porch Windows are low maintenance and designed specifically for use in a porch or sunroom that will stand up to the harsh Minnesota climate. The vinyl material is lightweight and flexible – with UV inhibitor built in – so it maintains transparency and durability. Glass windows are made for inside the house, not for an unconditioned outdoor space.

### Sunspace Vinyl Porch Windows:

- Preserve the feeling of a porch, an outdoor space
- Are lightweight and easy to operate, today and for years to come
- Are easy to remove and clean with just soap and water
- Are made for the outdoors with sturdy aluminum frames that stand up to the fluctuations in temperature and humidity
- Can be added to an existing screened-in porch without structural changes
- Are custom sized to fit your needs and include 5 frame colors, tinting options, and screen options
